

WHY DO WE NEED TO BE AFFECTED BY THE VIRUS!

*Bacteria and viruses are everywhere, hidden dangers to the naked eye, are endangering your health *
According to the British National Health System (NHS) website, the survival time of a virus after it leaves the human body depends on the surface condition of the object it is attached to, as well as environmental conditions such as temperature and humidity. Hard objects such as elevator buttons and door handles are virus vectors that require extra care.

MIRON AEGIS series (traditional LED lighting + UV LED) basic functions include:

The general lighting LED is controlled by the sensor to realize the basic functions of general lighting. When people come, the lights are on, and off when people go. At the same time, when the AC power is not cut off, it also realizes that within 24 hours, each time the sensor detects that there is no one, the UV light source is started up to 3 times, each time the UV control function does not exceed 15 minutes. When AC power is cut off, the sensor control and 24-hour time tracking function stop. After the AC is powered on again, a new cycle of 24-hour time tracking restarts.

- Patent invention (induction LED + UV ultraviolet disinfection lamp)
- Motion sensing function

AEGIS series:

Can be used in homes, hotels, bedrooms, toilets and clinics
Choice of surface-mounted or recessed-mounted fixture,
two models respectively

- 1) Traditional LED lighting (3W) + UV LED(2W)
- 2) Traditional LED lighting (6W) + UV LED(3W)
